Jogos Olímpicos de Verão de 2024 sportbet club Paris: Preocupações com a qualidade da água no Rio Seine

O Rio Seine é um ponto de referência sportbet club Paris, tanto para os parisienses quanto para os turistas. Nas Olimpíadas de Verão de 2024, o rio será o centro das atenções, sediando eventos como o triatlo e a cerimônia de abertura, que, pela primeira vez na história dos Jogos Olímpicos, não acontecerá sportbet club um estádio.

A partir do Pont Alexandre III Bridge, as corridas individuais de triatlo começarão com uma natação de 1,5 quilômetro, seguida por uma corrida de 40K de bicicleta – passando pelo Le Grand Palais e Champs-Élysées – e terminando com uma corrida de 10K pelo coração da cidade. Uma equipe mista de revezamento, composta por quatro atletas (dois homens e duas mulheres), também começará no Pont Alexandre III Bridge, com cada atleta completando uma natação de 300 metros, seguida por uma corrida de 5,8K de bicicleta e 1,8K de corrida.

Se tudo correr bem, será um momento histórico, já que nadar no Seine tem sido ilegal por mais de 100 anos, devido aos níveis de poluição da água. No entanto, alguns advertem que ainda existem perigos potenciais abaixo da superfície do rio.

Recentemente, testes compartilhados com a tecnologia da Fluidion mostraram que o Seine ainda não é seguro para nadar, de acordo com os padrões estabelecidos pelo World Triathlon, devido a níveis elevados de bactérias *E. Coli* na água, potencialmente expostos a riscos graves à saúde.

As autoridades gastaram pelo menos €1.4 bilhão (R\$1.55 bilhão) para limpar o rio. No mês passado, uma instalação de armazenamento de chuva foi aberta que pode armazenar 20 piscinas olímpicas de água para reduzir a pressão sobre a rede de esgoto e reduzir o risco de água residual ser descarregada no Seine, de acordo com um comunicado da Paris 2024.

Enquanto isso, times de triatlo de todo o mundo estão se preparando para o pior e esperando o melhor.

Preocupações com a qualidade da água

"Para mim, será muito frustrante e muito vergonhoso para a França, Paris e os Jogos Olímpicos se não pudermos fazer um triatlo", disse a triatleta francesa Jeanne Lehair sportbet club uma entrevista telefônica.

A cidade de Paris está monitorando o local olímpico do Seine com seu próprio laboratório, mas a empresa Fluidion, fundada sportbet club Paris sportbet club 2012, também está verificando a qualidade da água do rio várias vezes por semana no Pont Alexandre III Bridge.

Os testes da Fluidion mostraram que, sportbet club média, os níveis de *E. Coli* no Seine entre início de abril e final de maio foram de cerca de 3400 MPN/100mL. De acordo com os cálculos da sportbet club, isso é mais de três vezes o nível necessário para "bom" qualidade da água, de acordo com os padrões do World Triathlon.

"Tivemos um tempo muito chuvoso nos últimos meses, causando muitos despejos combinados de esgoto sportbet club Paris e rio acima", disse Dan Angelescu, CEO da Fluidion, sportbet club 31 de maio via e-mail. "O impacto na qualidade da água é evidente, com picos bacterianos notáveis seguindo eventos de chuva."

Nearly all of France has seen 120 to 200% of normal rainfall over the past three months, with numerous episodes of flooding across the country, especially the north, according to Météo France.

The highest *E. Coli* levels recorded by Fluidion were 23590 MPN/100mL on May 2 and 13090 MPN/100mL on May 30, according to Angelescu. The May 2 result is more than 20 times higher

than World Triathlon's "good quality" level, according to sportbet club 's calculation.

More recently, following several days of dry and sunny weather, *E. Coli* levels on Monday 6 June were 2280 MPN/100mL, according to Angelescu, better than previous results but still above acceptable levels for swimming.

If *E. Coli* levels remain this high, the swimming leg of the triathlon will have to be cancelled, according to World Triathlon competition rules, unless the organization's medical committee decides that the race can go ahead.

E. Coli is not typically pathogenic itself, but it can indicate the presence of other pathogens, which can cause skin rashes, diarrhea, serious gastrointestinal diseases and, in very rare cases, even death.

However, Angelescu said that the water quality of the Seine is likely to improve significantly before July due to drier and sunnier summer conditions, which will reduce the frequency of sewage spills.

"It is highly speculative and scientifically unsound to project any conclusions about water quality during the Games based on recent trends," he said.

Angelescu said that "significant infrastructure projects" by the city of Paris designed to improve water quality will have a "substantial" impact.

"These tanks are expected to become operational before the Games, potentially becoming a ... Games changer," added Angelescu.

"When our instruments and data indicate that the water quality is good, we will be the first to dive in, headfirst!"

Angelescu's tone of optimism isn't universally shared.

French charity Surfrider Foundation Europe warned in April that they were "genuinely concerned about the health of athletes" after only one of the 14 samples collected by the organization indicated a satisfactory standard of water quality for swimming.

Two months later, the charity told that they have since taken five additional samples, with *E. coli* levels remaining "systematically above the guide values."

Paris 2024 said they still have "great confidence" in the city of Paris to improve water quality to the "necessary standard" in time for the Games.

"Generally, water quality in the Seine continues to improve every day," they said in a statement toin early June. "By the time of the Games, bacteriological pollution in the Seine will have been reduced by 75% thanks to the range of actions undertaken by our partners."

In a statement to sportbet club , the city of Paris said that recent grey and rainy conditions have had a "major impact" on the Seine's water quality. A lack of sunlight – which would normally help to kill bacteria – has also contributed to the poor quality, they said earlier this month.

They added: "It is only when summer conditions (strong sunshine, high temperatures, prolonged absence of rain) become established that the Seine will gradually return to its 'summer' appearance, and that we will see a gradual and significant improvement in water quality."

Following multiple days of sunny weather in the first week of June, *E. Coli* levels improved near Pont Alexandre III Bridge, according to official data from the city of Paris shared with sportbet club , but whether the good weather will last remains to be seen.

No precipitation trend, higher or lower than average, has been predicted for areas around Paris for the summer.

Since June 1, *E. Coli* levels declined from around 7000 UFC/100mL (equivalent units to MPN/100mL, according to World Triathlon) to just below 1000 UFC/100mL on June 9, according to official data.

However, World Triathlon's Competition Rules 2024 say that these levels are still too high for swimming, unless the organization's medical committee decides that the race can go ahead.
